Justin Barreras

Backend Software Engineer | SQL and Data Systems

Ventura, CA (open to remote and hybrid) • (805) 302-8601 • justin.barreras20@gmail.com • github.com/theloosegoose18

Summary

Senior Computer Science student at Oregon State University (graduating June 2027) and USMC veteran with 6+ years of remote technical support experience. Builds relational databases, REST APIs and concurrent network services in Python, C, JavaScript and SQL. Project Lead for a DigiClips capstone that processes radio, video and print media data in C. Brings nearly 5 years of HIPAA compliant work with protected health information for the Department of Veterans Affairs, and uses AI assisted development tools to prototype, test and document faster.

Technical Skills

- **Languages:** Python, C, C++, C#, SQL, JavaScript, PHP, HTML/CSS
- **Backend and Data:** REST API design, Node.js, Express, MySQL (schema design, stored procedures, triggers, views), Google Cloud Datastore, Google App Engine
- **Systems:** Linux and Windows, Unix sockets, multiprocess servers, TCP/IP, DHCP, DNS, VPN
- **Tools:** Git and GitHub, JetBrains suite, Visual Studio, VS Code, Postman and Newman, ServiceNow, React with Vite
- **AI Assisted Development:** generative AI for prototyping, debugging, test planning and documentation
- **Professional:** problem solving, team leadership, collaboration, attention to detail, clear technical writing

Projects

Backend Processed Media Data | DigiClips, OSU Senior Capstone | Project Lead | Sept 2026 to June 2027

- Lead the team building a backend pipeline in C that applies image and text recognition to radio, video and print news media.
- Set technical direction, build prototypes and reference code for teammates to follow, and clear blockers to keep the 30 week project on pace.

Noir Cards: Inventory and Order Management System | Node.js, Express, MySQL, React | GitHub | Winter 2026

- Designed a normalized MySQL schema of 6 tables with foreign keys, composite unique constraints and 6 reporting views covering products, inventory locations, customers and orders.

- Wrote 24 stored procedures and 5 triggers that lock in price at sale, deduct and restore stock as order items change, and update customer reward points automatically.
- Built a 26 endpoint REST API on Express with a pooled mysql2 connection, connected to a React frontend with full CRUD on every entity and a one click database reset.

Business Review REST API | Google App Engine, Cloud Datastore | Fall 2026

- Implementing 11 REST endpoints for businesses and reviews, including validation, status codes and cascading deletes, deployed live on Google Cloud.
- Verifying behavior against an automated Postman and Newman test suite.

Encrypted Client and Server Messaging | C, Unix sockets

- Built five C programs: encryption and decryption servers running as background daemons, two matching clients and a key generator.
- Servers handle five concurrent connections by delegating each client to a child process, with a handshake that rejects the wrong client and looped send and receive calls for reliable transfer.

Experience

Tier 2 IT Helpdesk Specialist | Telecom Inc. (through Boldyn Networks) | Ventura, CA | May 2020 to Present

- Resolve over 90% of Tier 1 and Tier 2 tickets by phone and chat, holding a 94% satisfaction rating from AI agent and supervisor reviews.
- Support up to 1 call and 3 live chats at once, diagnosing Wi-Fi, Ethernet, VPN and remote access issues across TCP/IP, DHCP and DNS.
- Manage ServiceNow ticket workflows and escalations to meet SLAs; 100% of requested field dispatch work orders approved.
- Refined troubleshooting templates and internal documentation to shorten ticket handling time. Agent of the Month, December 2020 and February 2021.

Remote File Clerk, Department of Veterans Affairs Contract | Integrated Solutions and Services Unlimited | Remote | June 2020 to January 2025

- Processed 80 to 120 patient records per day into VA electronic health records at 99% accuracy, with a single correction in nearly 5 years.
- Handled protected health information under HIPAA through the VA Access Gateway and maintained internal and VA databases.

Field Radio Operator and Maintenance Manager | United States Marine Corps | MCAS Cherry Point, NC | August 2011 to October 2015

- Installed, troubleshot and maintained tactical communications networks and administered the newly fielded Joint Range Extension system.
- As Maintenance Manager for 2d LAAD Battalion, Bravo Battery, kept 100% accountability of major equipment and filed over 2,000 reports, tickets and work orders.
- Wrote the Maintenance Manager reference binder used to train incoming Marines.

- **Awarded a Meritorious Mast (January 2014)** for [reason].

Additional Experience

- **Nondestructive Test Technician**, Helium Leak Testing, Inc., Oct 2019 to Mar 2020: executed engineering test procedures on medical and aerospace parts. Employee of the Month, December 2019.
- **Assistant Manager**, Arsenal Comics and Games, Aug 2018 to Dec 2022: supervised staff across 2 storefronts and kept inventory counts current in the store database.
- **Online Reseller**, eBay and Whatnot, Jan 2017 to Present: manage inventory, listings and customer service with 100% positive feedback.

Education

Bachelor of Science, Computer Science | Oregon State University | Expected June 2027

- **Relevant Coursework:** CS 261 Data Structures, CS 290 Web Development, CS 340 Introduction to Databases, CS 372 Introduction to Computer Networks, CS 374 Operating Systems I
- **Current Coursework:** CS 461 Senior Software Engineering Project, CS 493 Cloud Application Development

Transfer Coursework | Ventura College | 2017 to 2019

Certifications and Affiliations

- PCEP, Certified Entry Level Python Programmer (in progress, expected December 2026)
- CompTIA Data+ (in progress, expected December 2026)
- Institute of Electrical and Electronics Engineers (IEEE), Member since 2023
- National Society of Leadership and Success, Oregon State University Chapter, Inducted 2026
